

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A reservation method, comprising:

displaying₁ in a single window₁ data in a calendar section configured to indicate consecutive dates available for reservation, an inventory information section configured to indicate a room available for reservation, and a reservation information section configured to receive credit card payment information input by a user; and

automatically updating the inventory information section to indicate the room available for reservation when consecutive dates are selected in the calendar section and automatically updating the calendar section to indicate consecutive dates available for reservation when the room is selected.

Claim 2 (Previously Presented): The method as recited in claim 1, further comprising:

completing the reservation of the room for the consecutive dates.

Claim 3 (Canceled).

Claim 4 (Previously Presented): The method as recited in claim 1, wherein the inventory information section comprises an image of the room.

Claim 5 (Previously Presented): The method as recited in claim 1, wherein the calendar section comprises a visual indication of the days for which the reservation is available.

Claim 6 (Previously Presented): The method as recited in claim 1, wherein the inventory information section is configured to indicate a plurality of rooms.

Claims 7-10 (Canceled).

Claim 11 (Previously Presented): The method as recited in claim 1, wherein the calendar section is configured to indicate a plurality of monthly calendars.

Claim 12 (Previously Presented): The method as recited in claim 1, wherein the calendar section is configured to indicate a current month and a subsequent month.

Claim 13 (Previously Presented): The method as recited in claim 1, wherein the inventory information section is configured to indicate a plurality of rooms and an availability of each of the plurality of rooms.

Claim 14 (Previously Presented): The method as recited in claim 1, wherein the reservation information section is configured to indicate at least one of a customer data field, a payment data field, and a reservation summary.

Claim 15 (Previously Presented): The method as recited in claim 1, further comprising:

providing within the single window a link to information outside of the single window.

Claim 16 (Previously Presented): The method as recited in claim 1, further comprising:

providing within the single window at least one of a navigation and a control command.

Claim 17 (Currently Amended): A computer program embodied on a computer readable medium implementing a reservation method, comprising:

a first code segment configured to display in a single window data in a calendar section indicating consecutive dates available for reservation, an inventory information section indicating a room available for reservation, and a reservation information section configured to receive credit card payment information input by a user; and

a second code segment configured to automatically update the inventory information section to indicate the room available for reservation when consecutive dates are selected in the calendar section and to automatically update the calendar section to indicate consecutive dates available for reservation when the room is selected.

Claim 18 (Previously Presented): The computer program as recited in claim 17, further comprising:

a third code segment configured to make the reservation of the room for the consecutive dates.

Claim 19 (Canceled).

Claim 20 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicate an image of the room.

Claim 21 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicate a visual indication of the days for which the reservation is available.

Claim 22 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicate a plurality of rooms.

Claim 23-26 (Canceled).

Claim 27 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicated a plurality of monthly calendars.

Claim 28 (Previously Presented): The computer program as recited in claim 27, wherein the first code segment is configured to indicate a current month and a subsequent month.

Claim 29 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicate a plurality of rooms and an availability of each of the plurality of rooms.

Claim 30 (Previously Presented): The computer program as recited in claim 17, wherein the first code segment is configured to indicate at least one of a customer data field, a payment data field, and a reservation summary in the reservation information section.

Claim 31 (Previously Presented): The computer program as recited in claim 17,
further comprising:

a third code segment configured to provide within the single window a link to
information outside of the single window.

Claim 32 (Previously Presented): The computer program as recited in claim 17,
further comprising:

a third code segment configured to provide within the single window at least one of a
navigation and a control command.

Claims 33-48 (Canceled).

Claim 49 (New): The method as recited in claim 1, wherein the displaying step
further comprises:

displaying, in said single window, a price information section indicating the price of a
room available for reservation.

Claim 50 (New): The computer program as recited in claim 17, wherein the first code
segment is further configured to display, in said single window, a price information section
indicating the price of a room available for reservation.
